Treatment base for high military vehicles

The ProMIL-214 treatment base is a product engineered and designed specifically for the needs and requirements of military users.

The ProMIL-214 treatment base is designed to give the optimal loading height in high military vehicles. It allows for an easy and gentle loading process. The low loading height enables patients to be loaded rapidly onto the platform.

The loading movement is cushioned and assisted with a progressive force

The treatment base is durable and designed for heavy usage

The functions are easy to operate

Platform Positions:

- The platform can be tilted for the treatment of shock patients
- For a regular treatment position the platform can be locked closer to the treatment seat
- Sideways sliding enables a flexible use of space

Functions:

- Locking and platform compatibility with most field-stretchers
- The loading angle can be adjusted up to 16 degrees
